

DMC

The DMC is a virtual private network, only accessible to our clients and partners, which can be used on a short term or long term basis to create secure video and audio links to and from single or multiple locations - anywhere in the world!

Our network opens the door for international video links where cost needs to be reduced without losing quality, security, and stability of your feeds. Within our network, we can set up a dedicated media portal where customers can create their own point to point or distribution network. Depending on the bandwidth and liability of the signal C4IP can deliver a solution that best fits your needs.

Our DMC is built on top of a first rate network spanning many professional data centers in Europe and the USA and with first rate connections to all parts of the world. The network is among the largest in the world, and is in the top-5 networks in Europe. A few points of interest worth mentioning are:

- Dedicated redundant fiber network
- A+ performance status beats most CDN's
- Global transit and peering partners
- Covers over 100 datacenters in Europe
- Connected to all Exchanges in Europe
- Connected to all major Global Carriers
- Current actual connected capacity: +175Gbps
- Uptime: > 99,99%, QoS: guaranteed
- NPT: EU <60ms, US <100ms
- Projected actual connected capacity 2008: +500Gbps

We don't rely on just one exchange or carrier. The network is connected to all leading exchanges and global carriers including AMS-IX, BPIX, DE-CIX, NYIIX, VIX, NETNOD, PL-IX, Swissix, NIX, Interoute, Abovenet, Global Crossing, KPN Eurorings, Teleglobe / VSNL and Teliasonera. This list is continuously growing.

Whether you need an in-store television distribution system for multiple locations, live broadcast point to point video links from and to anywhere in the world, or a secure content delivery system for video on demand, play-out, or digital signage, We are able to provide you a custom solution.
